

Download and install **FortiClientVPNOnlineInstaller** <https://links.fortinet.com/forticlient/win/vpnagent>

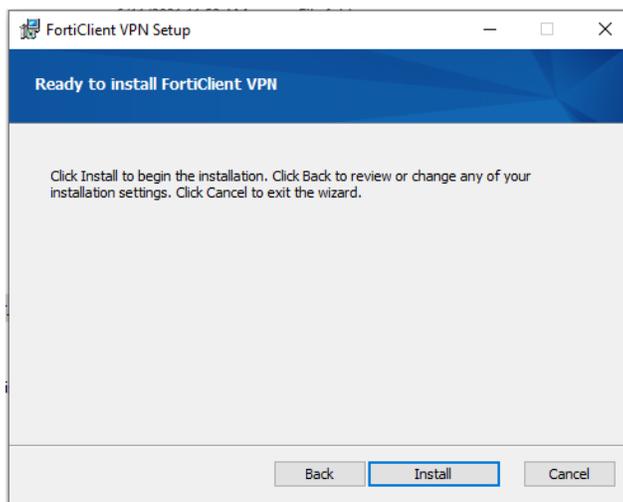

Start the installation file *FortiClient Installer*. The software is being downloaded and the installation is in progress

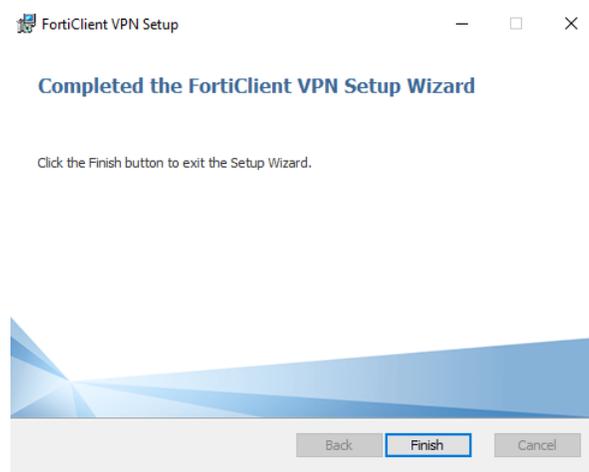

Select a bookmark „**Yes, I have read and ...**“ Then click **Next**

If the appropriate location for the installation by default, click **Next**

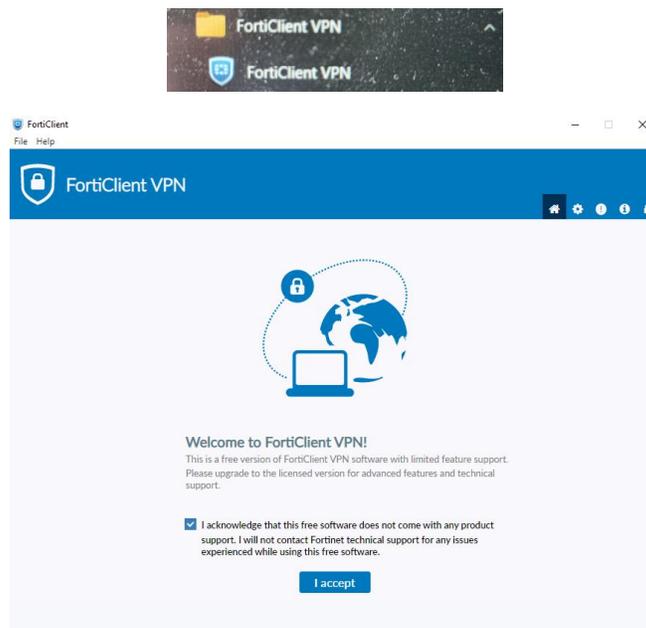

Confirm installation – click **Install** and the process begins.

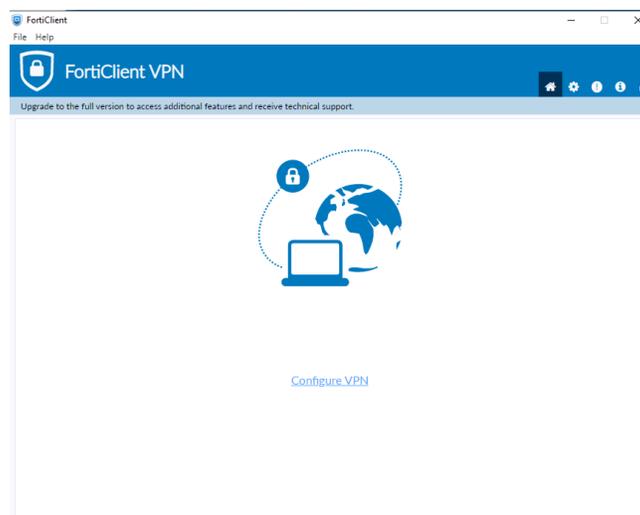

Installed. Click **Finish** and the window closes.

Then find the **FortiClient VPN** in the **Start** menu and launch it

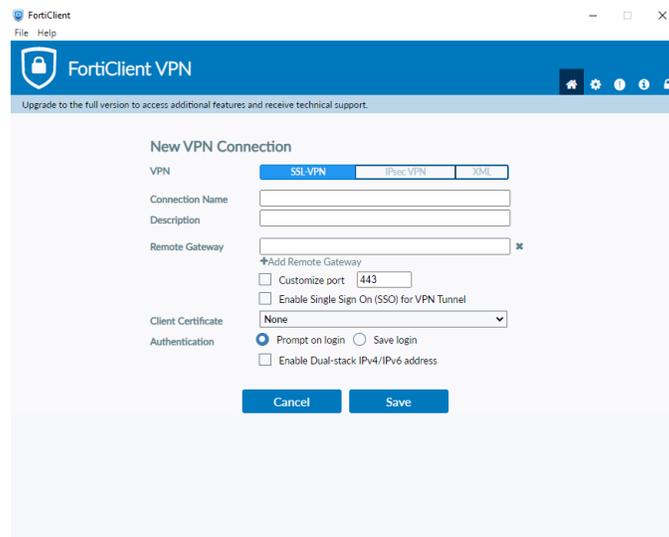

The first window asks you to check the settings - **I accept**

The following window prompts you to configure the VPN.

We choose. This window only appears once (if configured properly), but the configuration window can be called up as needed.

Configuration window. Here are just the most important things.

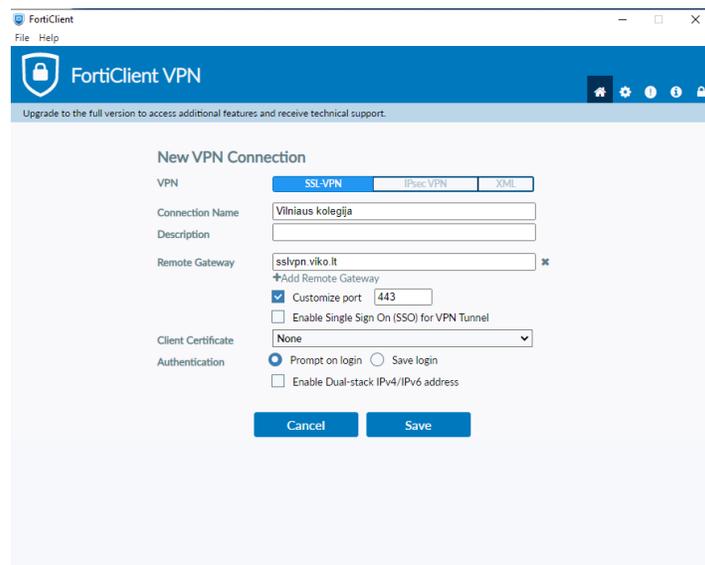

Connection Name – connection name. As you call it, e.g. Viko, Vilnius College or similar. If you have more logins through this tool then it will be easier to catch which one is.

Description – not necessary.

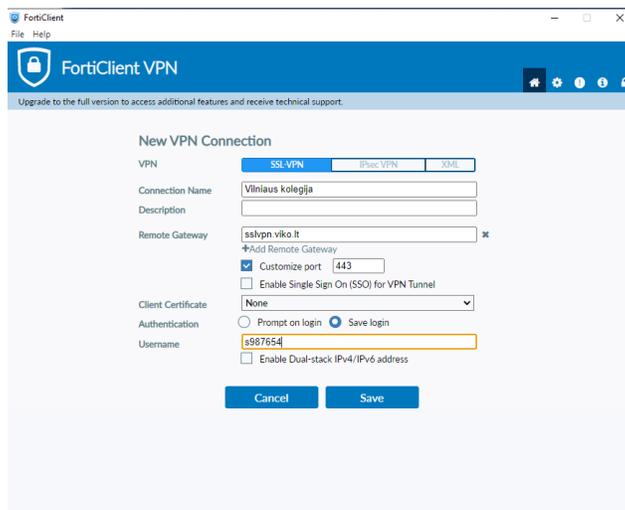

Remote Gateway – this part is mandatory. Here is the address- **sslvpn.viko.lt**

We recommend that you check the box below **Customize port** ir palikti **443** port.

When filling in the required fields will look similar.

Client Certificate we don't choose anything. And keep in mind that there are two choices: **Prompt on login** and **Save login**. If you choose **Prompt on login** it will always be necessary to enter the login name and password when connecting. If you choose **Save login** this will save the login name and you will only need to enter the password. For example.

The **user ID** is entered here. You are using your login names:

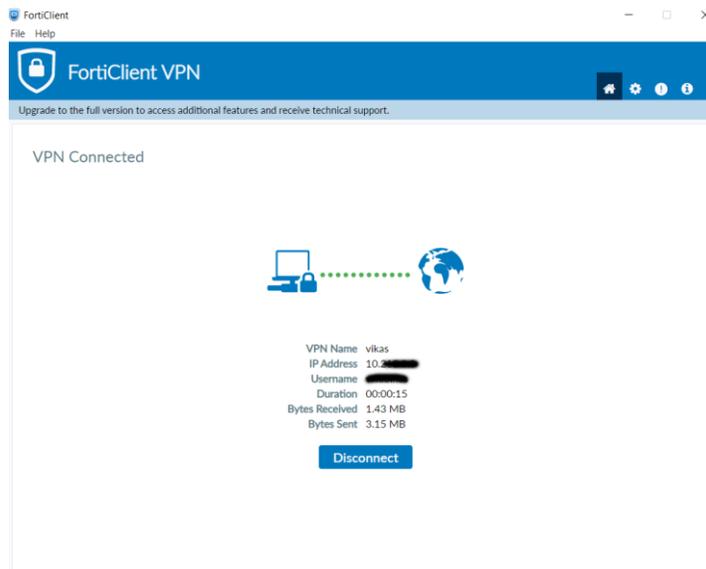

Staff and teachers – n.lastname and password

Students – s987654 (your ID) and password.

We do not use suffixes ad.viko.lt or others.

Save will be saved and you will not need to enter that data next time (password only) and **Connect**

Logging in, the app is showing the login status as a percentage and logging in, we see the following window. Example

Here you will see the login name you provided, the IP address you received, your username, the duration of the connection, the number of bytes downloaded or sent. It can simply be minimized and work within the college's internal network.

The following icon with a lock will appear on the taskbar

Clicking on it will bring up a context menu where there will be several options, including logout.

You can also log out by opening the connection data window, there is a button **Disconnect**

The next time you open the FortiVPN client, you will have the following window (example). All you have to do is enter your password and click **Connect** and you will be connected.

Upgrade to the full version to access additional features and receive technical support.

VPN Name	Vilniaus kolegija
Username	s987654
Password	

Connect
